2025 Planting Date and Systems Management Trial

RESULTS | PLANTING DATE TRIAL

Across the two planting dates in the trial, U of I researchers compared different combinations of Meristem products with a control treatment and standard commercial fungicide/insecticide seed treatment. The trial compared the following treatments:

- **Residue Management:** Prior to planting, Excavator® AMS with Cyclestrike™ LR was applied to break down corn residue and release nutrients, compared with no residue management application prior to planting.
- **Seed Treatment:** At planting, the research compared soybeans with no seed treatment, traditional commercial seed treatment, and Hopper Throttle® MaxStax™ Soybean.
- **V4 Foliar:** At V4, Harvestshield™ Complete was applied as a foliar stimulant, compared to no V4 application.
- All treatments received R3 fungicide application and insecticide application.

WITH YOUR NEXT SOYBEAN SEED PURCHASE.

POWERED BY
BIO-CAPSULE TECHNOLOGY
INNOVATION DELIVERY SYSTEM

IT COVERS. IT PAYS. THAT'S THE NAKED TRUTH.

BACKED BY A \$60/ACRE REPLANT PROGRAM

Hopper Throttle® MaxStax™ Soybean is a revolutionary combination of biology, nutrition, and EPA-registered actives delivered seamlessly through an advanced planter box seed fluency system.

Powered by Meristem's patented Bio-Capsule™ Technology, farmers now have an easy-to-use system to replace costly traditional liquid soybean seed treatment.

RESULTS | SYSTEMS MANAGEMENT TRIAL

Main Effects on Grain Yield & Yield Components

For this trial conducted by the team at the Univ. of Illinois Department of Crop Sciences Crop Physiology Lab, no-till soybeans were planted into corn stalks April 18. The research compared 12 combinations of different seed treatments and foliar applications replicated 5 times in randomized block design. Grain yield and quality from the different treatments were evaluated.

Dry conditions late in the season limited yields at the Champaign, IL site, reducing yields in general.

Factor	Level	Grain Yield (bushels/acre)	Seed Number (seeds/m²)	Seed Weight (mg/seed)	Protein (%)	Oil (%)
Seed Treatment	Commercial	66	3207 ^B	119	34.0 ^B	20.5
	HT MaxStax Copack	68.3	3325 ^A	120	34.3 ^A	20.4

Key Finding

Averaged across foliar sprays, Hopper Throttle MaxStax copack had an advantage over commercial seed treatment **by 2.3 bu/A.**

GO NAKED. PLANT EARLY.

Co-packed with BorneX™, GuardC™, Metalaxyl ST and Prephyte™ ST*

Industry-Leading Bradyrhizobia Inoculant
Aggressive multi-strains of Bradyrhizobium for accelerated early season nodulation.

Metalaxyl ST EPA Reg No.: 94485-8
Industry-standard systemic fungicide for control of phytophthora and pythium.

Prephyte™ ST EPA Reg. No.: 94485-5-95552
Broad-spectrum, EPA-registered fungicide for prevention, control or suppression of many soil-borne diseases.

Revline®
Proven, industry-leading biostimulant PPFM strain that builds massive root structures & healthier plants.

7. BorneX™ EPA Reg. No.: 92311-6-94485
EPA-registered fungicide to prevent soil-borne fungal diseases such as Fusarium (causal agent for SDS) and Rhizoctonia.

Protectis™ Beauveria Bassiana
A fungal strain that increases microbial activity and promotes plant vigor during periods of stress.

GuardC™ FIFRA 25b Exempt Product
Bionematicide containing Fungal chitosan to suppress nematodes

Base Pail Seed Fluency Blend

- Seed Fluency
- Ether Enzyme Technology (*lipase & mannanase*)
- IonLock Mn & Fe
- 0.94 lbs IonLock Zinc

VALUE IN THE PAIL: \$74.00/A

REPLANT: \$60/acre Ask your sales rep about Meristem’s \$60/acre replant program on HT MaxStax Soybean
